

Griplock Track Stabilizer

Manufacturers & distributors of Lighting Track warn against cable-suspended tracks tilting due to an imbalance caused by the attached lamps.

An 8" nickel-plated stem screws down onto the threaded plunger of our specially modified track-suspension Glider. This not only locks down the cable-gripping mechanism but allows the cable to leverage an off-balance track back to its correct alignment.

Ask for p/n 15Z-832-SR-8
Includes rod, Glider and 8-32 bolt.
Cables and ceiling attachments not included.
